Marble on Mac
Sebastian Wiedenroth
current status

- Qt-only build
- distributed in a .dmg (disk image)
- dmg created by a shell script
ideas for improvement

- Marble Widget on OSX (Developer Package)
- Improve UI on OSX
- Mac-Style Updates
- support „current location“
Marble Widget on Mac

- a few questions on the mailinglist about it
- short discussion with Dennis on irc
- make it more easy for developers to integrate Marble Widget
- recommendations / help welcome :)}
Ul on OSX

- mostly small stuff
- icons in menus (not)
- capitalize „marble“ in menubar
- the strange widget on the left side ;-)
Mac-Style Updates

- Currently:
  - no update notification
  - no automatic update on a new release
  - user has to manually download and install
Mac-Style Updates
Mac-Style Updates

- Sparkle
  - Framework for Mac software-updates
  - display release notes
- Appcasting (RSS)
- DSA signatures for security
Mac-Style Updates

A new version of Pixen is available!
Pixen 2.0 is now available—you have 1.5. Would you like to download it now?

Release Notes:

**Speed. And more speed.**
Yes, Pixen is designed first and foremost for pixel art, but it can be useful for simple graphics editing as well. So now Pixen is speedy even working with extremely large images with multiple layers.

**Infinite tiling.**
Pixen’s tiling view now can draw infinite pixels, filling the window. Additionally,
current location

- at the moment not available in our builds
- „KDE Geolocation Services“?
current location

• should we ship libgps?
• and/or use „Core Location“?
  • also uses wlans etc. to find user location
• OS X 10.6 only
happy hacking! :-}
